

Abstract

These results suggest that the presence of a social network is a significant factor in the decision to seek help. The study also found that the presence of a social network was associated with a higher likelihood of seeking help from a professional.

Students are **asked** to complete a 10-minute survey on **Twitter**. The data from this survey are used to improve the **quality** of the **content** of the **course**. The **survey** is **anonymous** and the **results** are **used** to **improve** the **course**.
